

Art, Design & Architecture Collection

The screenshot shows the ProQuest website interface for the Art, Design & Architecture Collection. At the top, it says "ProQuest" and "Access provided by Kingston University". Below this is a navigation menu with "Basic Search", "Advanced Search", "Publications", and "Change databases". A search bar is prominently displayed with the placeholder text "Enter search terms...". Below the search bar are filters for "Full text" and "Peer reviewed". To the right of the search bar is a "Search tips" link. Below the search bar, there is a descriptive paragraph: "A comprehensive survey of current publications in the fields of visual and applied arts. This collection includes the specialist indexes ARTbibliographies Modern (covering modern and contemporary art), Design and Applied Arts Index (for all aspects of design and crafts) and the International Bibliography of Art (covering scholarship on Western art history), together with a complementary collection of current full-text journals, Arts and Humanities Full Text." Below this paragraph, it states "Coverage: 1973 - current" and provides a "View title list" link. There are two columns of content: "Subject coverage" and "Included databases". "Subject coverage" lists: Art history, Architecture and architectural history, Crafts, ceramics, glass and jewellery, Decorative art and antiques, Fashion, textiles and dress, Furniture and interior design, Industrial design, and Modern and contemporary art. "Included databases" lists: ARTbibliographies Modern (ABM), Arts & Humanities Database, Design & Applied Arts Index (DAAI), and International Bibliography of Art (IBA). To the right of these columns is a "Want to Learn More?" section with three options: "Search the online Help", "Discover answers to common questions at ProQuest's Product Support Center", and "Contact Support if you need further assistance." Below this is a "Search tip" section stating: "By default, we will look for documents with all the terms entered. Use 'quotation marks' to search for exact".

The **Art, Design & Architecture Collection** is a comprehensive survey of current publications in the fields of visual and applied arts.

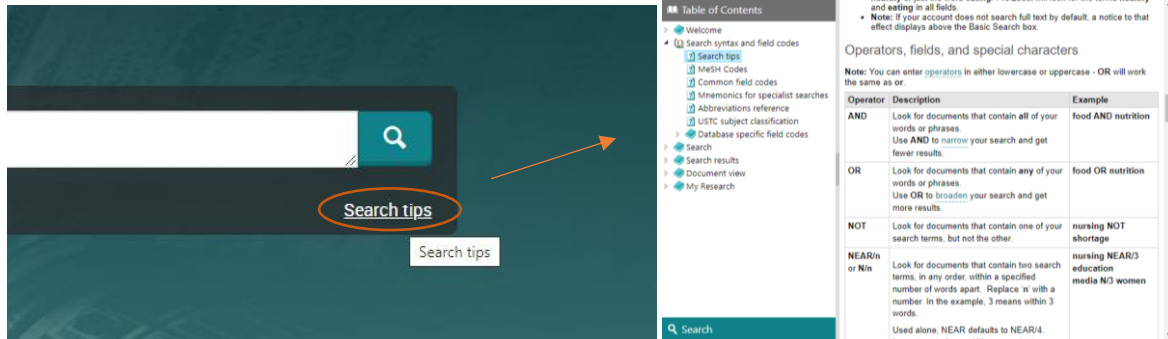

The **Art, Design & Architecture Collection** includes ProQuest's specialist indexes

- **ART bibliographies Modern** (covering modern and contemporary art),
- **Design & Applied Arts Index** (for all aspects of design and crafts),
- **International Bibliography of Art** (covering scholarship on western art history),
- together with a complementary collection of current full-text journals from **ProQuest's Arts & Humanities Database**.

So firstly, let's do a simple search by using "quotation marks" to search for exact phrases.

Below the search bar you can choose to limit your search result by clicking on (full text) and (peer reviewed)

The (Search Tips) helps you to create your search, as you can see the search tip operator and special characters will help to guide you through your search

Hide highlighting

Following the same methodology and rules that were applied in the previous Parts I-III of this work, Part IV presents the mathematical remarks on the right regular pyramidal forms, either complete or truncated (a frustum of pyramid). The first remark examines the effects of h and b on S . The second remark calculates the minimum total surface area (S_{Min}) in two cases, case of constant h (variable b) and case of variable h (constant b). The third remark calculates the walls ratio R_{W} and the critical walls ratio R_{W^0} . The last remark calculates the numerical equality between S and V . In conclusion, the importance of the findings of the entire work (Parts I-IV) in advanced **building analysis** is highlighted and discussed [PUBLICATION ABSTRACT]

Abstract Following the same methodology and rules that were applied in the previous Parts III of this work, Part IV presents the mathematical remarks on the right regular pyramidal forms, either complete or truncated (a frustum of pyramid). The 1st remark examines the effects of h and b on S . The second remark calculates the minimum total surface area (S_{Min}) in two cases, case of constant h (variable b) and case of variable h (constant b). The third remark calculates walls ratio R_{W} and the critical walls ratio R_{W^0} . The last remark calculates the numerical equality between S and V . In conclusion, the importance of the findings of the entire work (Parts I-IV) in advanced **building analysis** is highlighted and discussed.
